*Dear Customers*

*As part of DKW's ongoing commitment to continue as a top class supplier of precision components it is with great pleasure that we can now announce the latest purchase of 2 new machining centres to further enhance our capabilities.*

*DKW has been supplying the Automotive, Oil, Electrical and Aerospace industries since 1969. In this time it has gained an enviable reputation for quality, price and delivery. In order to do this the company has continually invested in the latest machine tool technology available.*

*As part of this ongoing process a new CNC lathe has now been installed. The Star SV32 will give a greater product range allowing a working diameter of 35mm to be processed, along side 30 tool positions, of which 14 are driven, allowing secondary machining operations to be completed on one machine. This will complement the existing 6 other Star sliding head machines currently at DKW. This lathe, as with all DKW's existing sliding head machines, employ's the use of bar fed materials allowing for 'lights out' production for maximum output, giving you the customer the best possible price.*

*Star SV-32 CNC Lathe*

*The 2<sup>nd</sup> machine to be purchased is a Doosan HP 5100. This will go alongside our current horizontal twin pallet milling machine and continue to allow DKW to produce precision milled components at competitive prices, in the fastest possible times.*

*The working parameters of the new machine are X-axis 850mm, Y-axis 700mm and Z-axis 750mm will allow larger components to be machined. To aid complex manufacture a 60-place tool changer is also part of the package, with a Fanuc 18i operating system, allowing easy operator interfacing.*

*The installation date for this is September 2008.*

***Doosan HP5100 Horizontal machine Centre***

*DKW continues to be a market leader in the supply of KANBAN precision components and continues to export around the world, including China and the USA and Europe, giving truly global care.*

*If you have any projects that you think would be suitable for either machine, or indeed for any of the existing plant, please send details to the following e-mail address.*

*We would more than welcome your enquiry, or if you prefer a site visit to DKW, or to your place of work.*

*I look forward to hearing from you soon.*

*Nick Iacobucci  
Managing Director  
DKW Engineering Ltd*
